

# PORTIA

## Program of Outcomes Research on Treatment with Injectables for Addiction

PORTIA is a study that will collect perspectives from people who receive injectable opioid agonist treatment (iOAT). These perspectives will help health officials improve the effectiveness and uptake of iOAT as they expand treatment services across B.C. and Canada.

## METHODS

Participants complete a variety of questionnaires during semi-structured interviews. These questionnaires collect information on demographics, substance use history, quality of life, access to treatment, experience with structural vulnerabilities, trauma, and more.

## ELIGIBILITY

To be eligible for the study, participants must fall into one (or both) of the following criteria:

1. Be someone who currently receives iOAT services
2. Be someone who has received iOAT services in the past
